

#Challenge

Optimising the **logistics** and **storage of calibration equipment** by reducing costs in order to improve its **competitiveness and quality of service**.

The customer had also to meet more demanding compliance with the new ISO standard.

#Solution

Trescal proposed a **complete tailor-made web-based calibration and asset management solution**.

- > Trescal managed the **calibration, repair and testing of all equipment**, in accordance with the current standards of the customer's home country on electrical systems
- > The web interface was used to **manage and supply** equipment and tools
- > All new equipment was registered immediately **providing access to a comprehensive overview** as well as supplier activity
- > Trescal was in charge of the instrument storage in a dedicated warehouse

Trescal provided an **Operational Maintenance Technician** a dedicated **support and continuous monitoring** of Key Performance Indicators (KPI's).

#Summary

\$ cost savings

Time optimisation

Tailor-made web interface

Customer proximity through dedicated expert services

Optimal results
