Precision calibration for a connected world

Trescal for Telecommunications
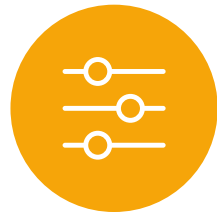

Trescal

We ensure network stability from every endpoint

In the fast-evolving telecommunication landscape, your equipment is your lifeline. Our accredited calibration services ensure the reliability and longevity of your test and measurement instruments, minimizing disruption and maximizing your ROI.

Calibration

For over 20,000 brands and 150,000 referenced instruments

- Spectrum analyzers
- Network analyzers
- Signal generators
- Power meters & sensors
- Oscilloscopes & RF amplifiers

Services provided in our labs or on a client site

Optimization of your calibration program

Repair & Maintenance

Multi-service, multi-brand offer

Long-term and specific repair solutions

Extended equipment utilization

Asset management

Customer portal to track equipment status, request service, obtain reports, access certificates

Audit readiness with instant access to technical and business data

Mobile app

Procurement

Independent from original equipment manufacturers

Flexible solutions

Equipment procurement advice

Strong connections with accredited calibration

Our 780+ accreditations guarantee quality & reliability

We service **high-end, high-accuracy telecommunications equipment**

ISO Calibration and testing services accredited to **ISO/IEC 17025** and quality management system **ISO 9001** certified

We have a deep understanding of **telecommunications industry best practices**

SI All calibrations are **traceable to the international system of units**

**28** **28 metrological test domains** in which Trescal is accredited

All your calibration certificates in your pocket with Trescal app

- View entire equipment inventory
- Scan instruments to view their calibration certificates
- Request quotes for service

Where you are, we are ...

We calibrate your telecommunications equipment directly on-site to help you control downtime

... Powering your connections from signal to consumer

We help you meet industry standards, keeping your network operating at peak performance
