

4Sight2 from Druck is your next generation solution for calibration and asset management.

4Sight2 is a dedicated calibration management software that provides full visibility of all your available assets, instruments, and resources.

Planning and notifications of upcoming calibrations all fully managed by 4Sight2 reducing missed or overdue calibrations.

Full analysis of an asset calibration history in an easy to view graphical format so you know the health of your assets and can plan accordingly, reducing down time.

One secure location that can be customised to suit your needs, simplifying audits and giving you the documentation you need.

Full uncertainty calculations giving highly accurate calibration data ensuring procedures are accurate, correct and compliant.

Benefits

- Perform automated calibrations direct from 4Sight2
- Custom calibration certificate generation
- Full uncertainty calculations
- Improved process efficiency and data quality
- Ready for any audits on asset history
- Easy to use anywhere in the globe in 11 languages
- Paperless upload and download to portable calibrators
- Full one touch asset trending
- Automatic calibration scheduling with notifications
- Define and control calibration routines for any plant or location
- Total visibility of your assets and instruments
- Fully scalable - from a single user to a global multi-site operation
